What is a Rectangular Concrete Water Tank?

A rectangular concrete water tank is a structure constructed primarily from reinforced concrete, designed to store large quantities of water in a rectangular shape. Its design is optimized for stability, ease of construction, and maintenance. The rectangular form allows for efficient use of space and simplifies formwork and reinforcement processes.

Key Components of a Rectangular Concrete Water Tank

- Walls: Vertical sides that contain the water and resist lateral water pressure.
- Base/slab: The bottom surface that supports the tank's contents and withstands the weight.
- Roof (if applicable): Covering to prevent contamination and evaporation.
- Inlet and outlet pipes: For filling and draining water.
