Common Questions and Answers in Module 16

Understanding the typical questions posed in Module 16 can help learners prepare effectively. Below, we detail some of the most common questions along with comprehensive answers.

1. How does budgeting help in managing personal finances?

Answer:

Budgeting is a fundamental tool that enables individuals to plan their income and expenses systematically. It helps track spending habits, identify unnecessary expenses, and allocate funds

toward savings or debt repayment. A well-maintained budget ensures that you live within your means, reduces financial stress, and prepares you for future financial goals.

2. What is a credit score, and why is it important?

Answer:

A credit score is a numerical representation of an individual's creditworthiness based on their credit history. It influences the ability to obtain loans, credit cards, and favorable interest rates. A higher score indicates responsible credit behavior and can lead to better financial opportunities, while a low score may result in higher interest rates or denial of credit.

3. What are the different types of credit available to consumers?

Answer:

Consumers can access various types of credit, including:

- Revolving credit (e.g., credit cards)
- Installment loans (e.g., car loans, personal loans)
- Mortgage loans for home purchases
- Student loans

Each type has its terms, interest rates, and repayment schedules, suitable for different financial needs.

4. How does compound interest work, and why is it beneficial?

Answer:

Compound interest is the interest calculated on the initial principal and accumulated interest from previous periods. It grows exponentially over time, making savings and investments more profitable. For example, saving in a compound interest account can significantly increase wealth over the long term due to this effect.

5. What are the differences between saving and investing?

Answer:

Saving involves setting aside money in low-risk, liquid accounts like savings accounts for short-term

needs or emergencies. Investing, on the other hand, entails purchasing assets like stocks, bonds, or real estate with the expectation of higher returns over the long term, though it involves higher risk.

Sample Questions and Model Answers (Based on 2014 Trends)

Question 1: Calculating the WACC

Scenario: A company has the following data:

- Market value of equity: \$5 million
- Market value of debt: \$2 million
- Cost of equity: 12%
- Cost of debt: 6%

- Corporate tax rate: 30%

Question: Calculate the weighted average cost of capital (WACC).

Sample Answer:

- Calculate weights:
 - Equity weight (E/V): $5 / (5 + 2) = 5/7 \approx 0.714$
 - Debt weight (D/V): $2 / (5 + 2) = 2/7 \approx 0.286$
- Calculate after-tax cost of debt:
 - Cost of debt (after tax): $6\% \times (1 - 0.3) = 4.2\%$
- Calculate WACC:
 - $WACC = (E/V \times Re) + (D/V \times Rd \times (1 - Tc))$
 - $WACC = (0.714 \times 12\%) + (0.286 \times 4.2\%) \approx 8.57\% + 1.2\% \approx 9.77\%$

Conclusion: The company's WACC is approximately 9.77%, which can be used as the discount rate for investment appraisal.

Question 2: Investment Appraisal Using NPV

Scenario: A project requires an initial investment of \$100,000 and is expected to generate cash inflows of \$30,000 annually for 5 years. The company's WACC is 10%. Calculate the NPV.

Sample Answer:

- Calculate the Present Value of inflows:
 - Use the PV of an annuity formula: $PV = \text{Cash inflow} \times \text{PV factor}$

- PV factor for 10% over 5 years = 3.7908

- Determine PV of inflows:

- $PV = \$30,000 \times 3.7908 = \$113,724$

- Calculate NPV:

- $NPV = \text{Total PV of inflows} - \text{Initial investment}$

- $NPV = \$113,724 - \$100,000 = \$13,724$

Conclusion: The project has a positive NPV of approximately \$13,724, indicating it is financially viable.
