Question What are the key differences between IFRS and GAAP in intermediate accounting? IFRS is principles-based, emphasizing overall concepts and fair value measurement, whereas GAAP is rules-based, providing detailed guidance. IFRS often allows more judgment in

areas like asset valuation and revenue recognition, leading to differences in financial statement presentation and measurement. How is inventory valued under IFRS in intermediate accounting? Under IFRS, inventory is valued at the lower of cost and net realizable value. Cost can be determined using methods like FIFO or weighted average, but the use of LIFO is prohibited under IFRS. What is the treatment of borrowing costs in IFRS intermediate accounting? IFRS requires that borrowing costs directly attributable to the acquisition, construction, or production of a qualifying asset be capitalized as part of the asset's cost. Other borrowing costs are expensed as incurred. How is lease accounting different under IFRS 16 compared to previous standards? IFRS 16 requires lessees to recognize most leases on the balance sheet as a right-of-use asset and a lease liability, eliminating the distinction between operating and finance leases for lessees. Lessor accounting remains largely unchanged. What is the approach to revenue recognition in IFRS for intermediate accounting students? IFRS 15 provides a five-step model: identify contracts, identify performance obligations, determine transaction price, allocate the transaction price to performance obligations, and recognize revenue when performance obligations are satisfied. How are financial instruments valued and disclosed under IFRS intermediate accounting? Financial instruments are classified into categories like amortized cost, fair value through profit or loss, or fair value through other comprehensive income, depending on the business model and contractual cash flow characteristics. Disclosures include valuation techniques and inputs used. What are the criteria for recognizing intangible assets under IFRS in intermediate accounting? Intangible assets are recognized if they are identifiable, the organization controls the asset, and it is probable that future economic benefits will flow to the entity. They are initially measured at cost and amortized over their useful life if finite. How is impairment of assets handled according to IFRS standards in intermediate accounting? Assets are tested for impairment when there are indicators of impairment. If the carrying amount exceeds recoverable amount, an impairment loss is recognized. The recoverable amount is the higher of fair value less costs to sell and value in use. What are the disclosure requirements for financial statements under IFRS in intermediate accounting? Disclosures include accounting policies, assumptions, and estimation uncertainties; detailed notes on assets, liabilities, income, and expenses; and information on risks, uncertainties, and contingent liabilities to ensure transparency and comparability. How does IFRS address the presentation of comprehensive income in intermediate accounting? IFRS allows entities to present comprehensive income either in a single statement of comprehensive income or in two separate statements: an income statement and a statement of comprehensive income, provided the total is clearly disclosed.
