Common PADI Dive Theory Exam Questions and Answers

Sample Question 1: What is Boyle's Law?

Question: Boyle's Law states that at constant temperature, the volume of a gas is inversely proportional to its pressure. How does this principle relate to diving?

Answer: As a diver descends and pressure increases, the volume of air in the lungs, buoyancy compensator, and other gas-filled spaces decreases. Conversely, during ascent, the volume increases, which can cause issues like lung over-expansion injuries if not managed properly.

Sample Question 2: Why is it important to perform a safety stop during a dive?

Question: What is the purpose of a safety stop at about 15 feet (5 meters) for 3 minutes?

Answer: The safety stop allows excess nitrogen to off-gas from the body, reducing the risk of decompression sickness. It provides an additional safety margin, especially after deep or extended dives.

Sample Question 3: What are the signs of nitrogen narcosis?

Question: Which of the following is a common symptom of nitrogen narcosis?

- A) Dizziness and impaired judgment
- B) Increased alertness
- C) Shortness of breath
- D) Ear pain

Answer: A) Dizziness and impaired judgment
