To give you a clearer idea, here's a sample quiz question from Week 2, along with its detailed answer:

Question:

In biology, explain the main functions of the cell membrane.

Answer:

The cell membrane, also known as the plasma membrane, primarily functions to regulate the movement of substances in and out of the cell. It acts as a protective barrier that maintains the cell's internal environment. The cell membrane is semi-permeable, allowing essential nutrients to enter, waste products to exit, and preventing harmful substances from entering. It also facilitates communication and signaling between cells through receptor proteins embedded within its structure.

Explanation:

Understanding the functions of the cell membrane helps in grasping how cells maintain homeostasis. The membrane's structure, composed mainly of a phospholipid bilayer with embedded proteins, enables selective permeability. This means the membrane can allow certain molecules to pass while blocking others, which is crucial for cell survival and proper functioning.
