How to Find Your Sears Drop Spreader Settings

Getting started requires knowing the correct settings for your specific task.

Check the User Manual

Many Sears spreaders include a chart or dial settings inside the manual that correlates to the type of material and the desired application rate.

Look for Model-Specific Labels

Some models feature a label or sticker on the spreader body with recommended setting numbers for different materials.

Use the Manufacturer's Recommendations

If the manual or labels are unavailable, consult Sears' official website or customer service for guidance based on your model number.

Step-by-Step Guide to Adjusting Sears Drop Spreader Settings

Proper adjustment involves setting the correct rate of material flow, which is controlled by a dial,

lever, or setting screw depending on the model.

Gather Necessary Materials

- Sears drop spreader
- Material to be applied (fertilizer, seed, etc.)
- User manual or manufacturer's setting chart
- Measuring tape or marked area for testing

Prepare for Calibration

- Fill the hopper with a small, known quantity of your material (e.g., 1 lb of fertilizer).
- Place the spreader on a flat, level surface or in your yard.

Adjust the Setting

- Locate the setting dial or adjustment lever on your spreader.
- Refer to the manufacturer's chart to set the dial to the recommended number for your material.

- Measure the amount of material applied in that area.
- Calculate the application rate (e.g., pounds per 1,000 square feet).

Refine the Settings

- If too much material is applied, reduce the setting number or flow rate.

- Repeat the test until you achieve the desired application rate.

Tips for Different Materials and Applications

Different products require different settings to ensure proper coverage and effectiveness.

Fertilizer

- Follow the recommended application rates on the fertilizer bag.

- Overlap passes slightly to ensure full coverage.

Granular Pest Control or Soil Amendments

- Use the lowest setting if applying in delicate areas.
- Adjust based on the manufacturer's guidelines for the specific product.

Special Considerations

- Always calibrate when switching materials, as different products have different flow characteristics.
- Apply in calm weather conditions to prevent wind drift and uneven distribution.

Maintenance Tips for Your Sears Drop Spreader

Regular Cleaning

- After each use, clean out any residual material to prevent clogging.

- Flow control lever or dial: Adjusts the amount of material dispensed.
- Coverage width: The width of the area covered in each pass.
- Calibration plate or chart: Guides you to set the spreader for various materials.

Sears offers several models, such as the Sears Drop Spreader and Sears Broadcast Spreader, each with slightly different calibration methods. Always refer to your model's manual for precise instructions, but the principles of calibration are similar across models.

How to Calibrate Your Sears Drop Spreader

Calibration is the process of determining the correct setting to apply a specific amount of material over a known area. Here's a step-by-step guide:

Step 1: Gather Materials

- A scale to weigh your product.
- A measuring tape or marked area (e.g., a 10-foot by 10-foot square).
- Your Sears drop spreader.
- The product you plan to apply (fertilizer, seed, etc.).

Step 2: Prepare and Weigh Material

- Fill the spreader with a known amount of product, say 5 pounds.
- Record the exact weight.

Step 3: Mark the Test Area

- Measure out a defined area, such as 10 feet by 10 feet (100 square feet).
- Mark the boundaries clearly.

Step 4: Set the Spreader

- Adjust the flow control lever to a starting setting based on the product's label recommendations or your previous experience.

Step 5: Spread the Material

- Walk at your normal application pace.
- Cover the marked area completely, overlapping slightly to ensure even coverage.

Step 6: Weigh Remaining Material

- Weigh the remaining product in the spreader.
- Subtract this from the initial weight to determine how much was dispensed.

Step 7: Calculate Application Rate

- Divide the amount dispensed by the area covered to determine pounds per 1,000 square feet, the standard measurement.

Step 8: Adjust Settings

- If the application rate is too high or low, adjust the flow control accordingly.
- Repeat the process until you reach the desired application rate.

Common Sears Drop Spreader Settings for Popular Materials
