Use CATIA V5's surface analysis tools to check for smoothness and develop features that facilitate injection molding, such as

proper parting lines and ribs. How do I simulate the deformation of a plastic water bottle surface in CATIA V5? Use the 'Dyna' module in CATIA V5 for structural analysis, applying material properties of plastic and simulating internal pressure or impact forces to observe deformation and ensure the design's durability. Can CATIA V5 help optimize the surface design for better plastic flow in injection molding? Yes, CATIA V5 offers tools like the 'Mold Tooling Design' and 'Flow Simulation' modules to analyze and optimize surface features, ensuring proper plastic flow, reducing sink marks, and improving overall manufacturing quality. What features in CATIA V5 are useful for designing ergonomic surfaces for a plastic water bottle? Tools such as 'Free Shape Surface' and 'Smoothing' allow you to create ergonomic curves and grips. Additionally, using 'Reflections' and 'Surface Analysis' helps refine the surface for comfort and aesthetic appeal.
