- The crankshaft runs along the bottom of the block, connected to the pistons via connecting rods.
- The timing belt or chain connects the crankshaft sprocket to the camshaft sprocket to coordinate valve timing.
- The fuel injectors or carburetor feed the mixture into the intake manifold or directly into the combustion chambers.
- The ignition coil produces the high voltage needed for spark plugs, which ignite the mixture.

Flow of Air, Fuel, and Exhaust

- Air intake enters through the air filter and passes into the intake manifold.

- Fuel is injected or mixed with air in the carburetor.
- The air-fuel mixture enters the combustion chamber via the intake valves.
- Combustion occurs when the mixture is ignited by the spark plug.
- Exhaust gases exit through the exhaust valves into the exhaust manifold and out through the muffler.

Cooling and Lubrication Pathways

- Coolant circulates through passages in the cylinder head and block, absorbing heat.
- The water pump circulates coolant, while the thermostat regulates flow based on temperature.
- Engine oil is pumped through galleries to lubricate moving parts, reducing friction and wear.
