- Expressed as crop water requirement (CWR), which guides the volume of water needed.

2. Duty of Water

- Represents the area that a unit quantity of water can irrigate in a given period.
- Typically expressed in hectares per cubic meter (ha/m³).

3. Fall and Head

- Fall: The vertical distance water drops in the system.
- Head: The energy possessed by water due to elevation and velocity.

4. Uniformity of Distribution

- Ensures water is evenly distributed across the irrigated area.
- Critical for preventing waterlogging and ensuring crop health.

Types of Irrigation Systems
